Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 1, *Screw threads*.

This third edition cancels and replaces the second edition (ISO 2903:1993), Clauses 1, 13 and 14, and Table 7 of which have been technically revised (now [Clauses 1](#), [11](#) and [12](#), and [Table 5](#)).

ISO metric trapezoidal screw threads — Tolerances

1 Scope

This document specifies a tolerance system for metric trapezoidal screw threads in accordance with ISO 2902. The tolerances refer to the design profile in accordance with ISO 2901.

The tolerance system does not apply to trapezoidal screw threads with special requirements on axial displacement, for example, machine tool lead and feed screws and nuts.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 965-1, *ISO general purpose metric screw threads — Tolerances — Part 1: Principles and basic data*

ISO 2901, *ISO metric trapezoidal screw threads — Basic and design profiles*

ISO 2902, *ISO metric trapezoidal screw threads — General plan*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 5408 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

4 Symbols

For the purposes of this document, the following symbols apply.

D_4	basic major diameter of internal thread
D	nominal diameter (internal thread)
D_2	basic pitch diameter of internal thread
D_1	basic minor diameter of internal thread
d	basic major diameter of external thread (nominal diameter)
d_2	basic pitch diameter of external thread
d_3	basic minor diameter of external thread
P	pitch
Ph	lead

N	designation for normal group of thread engagement
L	designation for long group of thread engagement
T	tolerance
$T_{D2}, T_{D1}, T_d, T_{d2}, T_{d3}$	tolerances for D_2, D_1, d, d_2 and d_3 , respectively (no tolerance for D_4)
El, ei	lower limit deviations
ES, es	upper limit deviations

5 Tolerance system

The system is based on the tolerance system for ISO general-purpose metric screw threads of ISO 965-1.

6 Tolerance positions

The following tolerance positions are standardized for the pitch diameters.

- For internal threads: H with zero fundamental deviation (El). See [Figure 1](#).
- For external threads: c and e with negative fundamental deviation (es). See [Figure 2](#).

The tolerance position for the minor diameter (D_1) and the major diameter (D_4) of the internal threads is always H, i.e. with zero fundamental deviation (El).

The tolerance position for the major diameter (d) and minor diameter (d_3) of the external threads is in all cases h, i.e. with zero fundamental deviation (es), and it is independent of the tolerance positions of the pitch diameter.

The fundamental deviations for the pitch diameters of internal and external threads are given in [Table 1](#).

Figure 1 — Internal threads with tolerance position H

Figure 2 — External threads with tolerance positions c and e for the pitch diameter

Table 1 — Fundamental deviations for the pitch diameters of internal and external threads

Pitch P	Fundamental deviations		
	Internal threads D_2	External threads d_2

12	0	-335	-160
14	0	-355	-180
16	0	-375	-190
18	0	-400	-200
20	0	-425	-212
22	0	-450	-224
24	0	-475	-236
28	0	-500	-250
32	0	-530	-265
36	0	-560	-280
40	0	-600	-300
44	0	-630	-315

7 Tolerance grades

The tolerance grades for the following screw thread diameters are standardized.

	Tolerance grades		
Minor diameter of internal threads, D_1	4		
Major diameter of external threads, d	4		
Pitch diameter of internal threads, D_2	7	8	9
Pitch diameter of external threads, d_2	7	8	9
Minor diameter of external threads, d_3	7	8	9

The tolerance grade for the minor diameter (d_3) of the external thread is always the same as for the pitch diameter (d_2). However, the values for T_{d3} and T_{d2} are not the same for a same grade.

The minor diameter tolerances of internal thread (T_{D1}) are given in [Table 2](#).

The major diameter tolerances of external thread (T_d) are given in [Table 3](#).

		44	280	850	850

9 Recommended tolerance classes

In order to reduce the number of gauges and tools, the tolerance classes should preferably be chosen from [Tables 8](#) and [9](#).

The tolerance class should be selected according to the tolerance quality (medium and coarse) and the length group of thread engagement (N and L).

The following general rules can be formulated for the choice of tolerance quality.

- Medium: for general use.
- Coarse: for cases where manufacturing difficulties can arise.

If the actual length of thread engagement is unknown, group N is recommended.

Table 8 — Recommended tolerance classes for the pitch diameter of internal threads

Tolerance quality	Length groups of thread engagement	
	N	L
Medium	7H	8H
Coarse	8H	9H

Table 9 — Recommended tolerance classes for the pitch diameter of external threads

Tolerance quality	Length groups of thread engagement	
	N	L
Medium	7e	8e
Coarse	8c	9c

10 Multiple-start threads

With the same pitch, the tolerances for multiple-start threads are the same as for single-start threads, with the exception of the pitch diameter tolerances which are enlarged.

For multiple-start threads, the tolerance values for pitch diameter (T_{D2} and T_{d2}), specified in [Tables 4](#) and [5](#), shall be multiplied by a factor according to [Table 10](#).

Table 10 — Factors for multiple-start threads

Number of starts	2	3	4	5 and larger
Factor	1,12	1,25	1,4	1,6

11 Formulae

11.1 General

The values for pitch and crest diameter tolerances and for fundamental deviations have been calculated by the formulae and then rounded off to the nearest value in the R40 series of preferred numbers.

The calculated values for the minor diameter tolerances, T_{d3} , have not been rounded.

In order to reproduce a smooth progression, the rules of rounding off are not always used.

When the tolerance values calculated by the formulae are different from the values specified by the tolerance tables, the values in the tolerance tables shall be used.

11.2 Fundamental deviations

The fundamental deviations for threads are calculated as given by [Formulae \(1\) to \(6\)](#):

$$EI_H = 0 \quad (1)$$

$$es_h = 0 \quad (2)$$

$$es_e = -(50 + 11P) \quad (3)$$

NOTE 1 This is applicable to threads with $P \leq 3$ mm.

$$es_e = -47,49 P^{0,5} \quad (4)$$

NOTE 2 This is applicable to threads with $P \geq 4$ mm.

$$es_c = -(125 + 11P) \quad (5)$$

NOTE 3 This is applicable to threads with $P \leq 2$ mm.

$$es_c = -(5 + 94,12 P^{0,5}) \quad (6)$$

NOTE 4 This is applicable to threads with $P \geq 3$ mm.

where

EI and es are expressed in micrometres;

P is expressed in millimetres.

11.3 Crest diameter tolerances

11.3.1 Tolerances for major diameter of external thread (T_d)

The tolerances for grade 4 are calculated as given by [Formula \(7\)](#):

$$T_d = 0,63 (180 P^{2/3} - 3,15/P^{0,5}) \quad (7)$$

where

T_d is expressed in micrometres;

P is expressed in millimetres.

11.3.2 Tolerances for minor diameter of internal thread (T_{D1})

The tolerances for grade 4 are calculated as given by [Formula \(8\)](#):

$$T_{D1} = 0,63 (230 P^{0,7}) \quad (8)$$

where

T_{D1} is expressed in micrometres;

P is expressed in millimetres.

11.4 Pitch diameter tolerances

11.4.1 Tolerances for pitch diameter of external thread (T_{d2})

The tolerances for grades 7, 8 and 9 are calculated as given by [Formulae \(9\) to \(11\)](#):

$$T_{d2} (7) = 1,25 (90 P^{0,4} d^{0,1}) \quad (9)$$

$$T_{d2} (8) = 1,6 (90 P^{0,4} d^{0,1}) \quad (10)$$

$$T_{d2} (9) = 2 (90 P^{0,4} d^{0,1}) \quad (11)$$

where

T_{d2} is expressed in micrometres;

P and d are expressed in millimetres;

d is equal to the geometrical mean value of the diameter range limits.

11.4.2 Tolerances for pitch diameter of internal thread (T_{D2})

The tolerances for grades 7, 8 and 9 are calculated as given by [Formulae \(12\) to \(14\)](#):

$$T_{D2} (7) = 1,7 (90 P^{0,4} d^{0,1}) \quad (12)$$

$$T_{D2} (8) = 2,12 (90 P^{0,4} d^{0,1}) \quad (13)$$
