

AEROSPACE MATERIAL SPECIFICATION

AMS6516™**REV. C**Issued 2011-07
Revised 2021-11

Superseding AMS6516B

Steel, Bars and Forgings and Forging Stock
1Cr - 10Ni - 7Co - 2Mo - 1.3W - 0.1V - (0.28 - 0.32C)
Vacuum Induction Melted, Vacuum Arc Remelted, Normalized and Annealed
Precipitation Hardenable
(Composition similar to UNS K91973)

RATIONALE

AMS6516C is the result of a Five-Year review and update of the specification. The revision updates the title to match the scope, updates the prohibition on substitutions (3.9, 8.6, 8.8), adopts new chemical testing standard (3.1), incorporates AS6279 as a requirement (3.8), adds additional notes on AS1182 (8.5), and allows prior revisions (8.7).

1. SCOPE

1.1 Form

This specification covers a premium aircraft-quality alloy steel in the form of bars and forgings 189 in² (1219 cm²) and under in cross-sectional area and forging stock of any size.

1.2 Application

These products have been used typically for heat treated parts requiring a combination of high strength, high toughness, and weldability, but usage is not limited to such applications.

2. APPLICABLE DOCUMENTS

The issue of the following documents in effect on the date of the purchase order forms a part of this specification to the extent specified herein. The supplier may work to a subsequent revision of a document unless a specific document issue is specified. When the referenced document has been cancelled and no superseding document has been specified, the last published issue of that document shall apply.

3. TECHNICAL REQUIREMENTS

3.1 Composition

Shall conform to the percentages by weight shown in Table 1, determined in accordance with ASTM A751 or by other analytical methods acceptable to purchaser.

Table 1 - Composition

Element	Min	Max
Carbon	0.28	0.32
Manganese	--	0.1
Silicon	--	0.1
Phosphorus	--	0.008
Sulfur	--	0.006
Chromium	0.7	1.3
Nickel	9.5	10.5
Cobalt	6.6	7.4
Molybdenum	1.8	2.2
Tungsten	1.1	1.5
Titanium	--	0.045
Aluminum	--	0.01
Vanadium	0.04	0.16
Oxygen	--	0.0020 (20 ppm)
Nitrogen	--	0.0015 (15 ppm)

3.1.1 Check Analysis

Composition variations shall meet the applicable requirements of AMS2259.

3.2 Melting Practice

Steel shall be multiple melted using vacuum induction melting followed by vacuum arc remelting.

3.3 Condition

The product shall be supplied in the following condition; hardness shall be determined in accordance with ASTM A370:

3.3.1 Bars

Normalized and annealed, having hardness not higher than 429 HB or equivalent (see 8.2), and ground or turned. Bar shall not be cut from plate (also see 4.4.2).

3.3.2 Forgings

Normalized and annealed, having hardness not higher than 429 HB or equivalent (see 8.2), and descaled.

3.3.3 Forging Stock

As ordered by the forging manufacturer.

3.4 Heat Treatment

Shall conform to the following:

3.4.1 Bars and Forgings

Shall be normalized by heating to 1965 °F ± 25 °F (1074 °C ± 14 °C) for a time commensurate with section thickness, 60 minutes minimum, and cooling in air to room temperature, and annealed by heating to between 1155 °F and 1255 °F (624 °C and 679 °C), holding at heat for 8 hours minimum, and air cooled. Pyrometry shall be in accordance with AMS2750.

3.4.2 Forging Stock

As ordered by the forging manufacturer.

3.5 Properties

The product shall conform to the following requirements.:

3.5.1 Macrostructure

Visual examination of transverse full cross-sections from bars, billets, and forging stock, etched in hot hydrochloric acid in accordance with ASTM A604, shall show no pipe or cracks. Porosity, segregation, inclusions, and other imperfections shall be no worse than the macrostructure limits of ASTM A604 shown in Table 2.

Table 2 - Macrostructure limits

Class	Condition	Severity
1	Freckles	A
2	White Spots	A
3	Radial Segregation	B
4	Ring Pattern	B

3.5.2 Micro-Inclusion Rating of Each Heat

No specimen shall exceed the limits shown in Table 3 determined in accordance with ASTM E45, Method D.

Table 3 - Micro-inclusion rating limits

Type	A		B		C		D	
	Thin	Heavy	Thin	Heavy	Thin	Heavy	Thin	Heavy
Worst Field Severity	1.5	1.0	1.5	1.0	1.5	1.0	1.5	1.0
Worst Field Frequency, maximum	(a)	1	(a)	1	(a)	1	3	1
Total Rateable Fields, Frequency, maximum	(b)	1	(b)	1	(b)	1	8	1
(a) Combined A+B+C; not more than three fields								
(b) Combined A+B+C; not more than eight fields								

3.5.3 Response to Heat Treatment

3.5.3.1 Bars and Forgings

Test specimens in the normalized and annealed condition as specified in 3.4.1, cut from product 189 in² (1219 cm²) and under in cross-sectional area, shall meet the properties specified in 3.5.3.1.1, 3.5.3.1.2, 3.5.3.1.3, and 3.5.3.1.4 after being solution treated by heating to 1940 °F ± 25 °F (1060 °C ± 14 °C), holding at heat for 60 minutes + 30, -0 minutes, quenching in oil (or equivalent), cooling to -100 °F (-73 °C) or lower, holding at temperature for minimum 1 hour, and air warming to room temperature; and tempered by heating to 960 °F ± 12 °F (516 °C ± 7 °F), holding at heat for 10 hours ± 2 hours, and cooling in air (or equivalent).

3.5.3.1.1 Tensile Properties

In accordance with ASTM A370. Unless otherwise specified, the strain rate shall be set at 0.005 in/in/min (0.005 mm/mm/min) and maintained within a tolerance of ±0.002 in/in/min (0.002 mm/mm/min) through 0.2% offset yield strain. After the yield strain, the speed of the testing machine shall be set between 0.05 in/in and 0.5 in/in (0.05 mm/mm and 0.5 mm/mm) of the length of the reduced section (or distance between the grips for specimens not having a reduced section) per minute. Alternatively, an extensometer and strain rate indicator may be used to set the strain rate between 0.05 in/in/min and 0.5 in/in/min (0.05 mm/mm/min and 0.5 mm/mm/min).

3.5.3.1.1.1 Longitudinal

Shall be as shown in Table 4; testing in the longitudinal direction need not be performed on product tested in the transverse direction.

Table 4 - Minimum longitudinal tensile properties

Property	Value
Tensile Strength	285 ksi (1965 MPa)
Yield Strength at 0.2% Offset	240 ksi (1655 MPa)
Elongation in 4D	10%
Reduction of Area	55%

3.5.3.1.1.2 Transverse

Shall be as shown in Table 5, determined on specimens selected and prepared in accordance with AMS2310. Transverse properties apply only to product from which tensile specimens not less than 2.50 inches (63.5 mm) in length can be taken.

Table 5 - Minimum transverse tensile properties

Property	Value
Tensile Strength	285 ksi (1965 MPa)
Yield Strength at 0.2% Offset	240 ksi (1655 MPa)
Elongation in 4D	10%
Reduction of Area	45%

3.5.3.1.2 Hardness

Shall be not lower than 53 HRC or equivalent (see 8.2) in accordance with ASTM A370.

3.5.3.1.3 Fracture Toughness

Shall be not lower than 100 ksi $\sqrt{\text{inch}}$ (110 MPa $\sqrt{\text{m}}$) K_{IC} , determined in accordance with ASTM E399 on specimens in the longitudinal LS or LR orientation from product 3.00 inches (76.2 mm) and over in nominal section thickness. If product size precludes use of specimens that will provide valid K_{IC} results, a K_Q value not lower than 100 ksi $\sqrt{\text{inch}}$ (110 MPa $\sqrt{\text{m}}$) will be acceptable.

3.5.3.1.3.1 Invalid test results in accordance with ASTM E399 shall be considered meaningful and the material shall be accepted to K_{IC} requirements if the thickest possible specimen was used and the calculated K_Q equals or exceeds the required K_{IC} and invalidity is due to one or both of the following conditions:

- a. $B < 2.5 (K_Q / \sigma_{TS})^2$
- b. $P_{max} / P_Q > 1.10$

3.5.3.1.4 Average Grain Size

Shall be ASTM No. 4 or finer for product 189 in² (1219 cm²) and under in cross-sectional area, determined in accordance with ASTM E112.

3.5.3.1.5 Mechanical property requirements for product outside of the range covered by 1.1 shall be agreed upon between purchaser and producer.

3.5.3.2 Forging Stock

A sample of stock shall be forged to a test coupon and heat treated as in 3.5.3.1, specimens taken from the heat treated coupon shall conform to the requirements of 3.5.3.1.1, 3.5.3.1.2, 3.5.3.1.3, and 3.5.3.1.4. Alternatively, specimens taken from stock after heat treatment as in 3.5.3.1 that conform to the requirements of 3.5.3.1.1, 3.5.3.1.2, 3.5.3.1.3, and 3.5.3.1.4, shall be accepted as equivalent to tests of a forged coupon.

3.6 Quality

The product, as received by purchaser, shall be uniform in quality and condition, sound, and free from foreign materials and from imperfections detrimental to usage of the product.

3.6.1 Steel shall be premium aircraft-quality conforming to AMS2300.

3.6.2 Bars shall be free from seams, laps, tears, and cracks after removal of the standard stock removal allowance in accordance with AS1182.

3.6.3 Grain flow of die forgings, except in areas that contain flash-line end grain, shall follow the general contour of the forgings showing no evidence of reentrant grain flow.

3.7 Tolerances

Bars shall conform to all applicable requirements of AMS2251.

3.8 Production, distribution, and procurement of metal stock shall comply with AS6279. The requirement for compliance with AS6279 becomes effective (18 months from date of publication).

3.9 Exceptions

Any exceptions shall be authorized by the purchaser and reported as in 4.4.4.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for Inspection

The purchaser of the product shall supply all samples for purchaser's tests and shall be responsible for the performance of all required tests. Purchaser reserves the right to sample and to perform any confirmatory testing deemed necessary to ensure that the product conforms to specified requirements.

4.2 Classification of Tests

4.2.1 Acceptance Tests

The following requirements are acceptance tests and shall be performed on each heat or lot as applicable:

4.2.1.1 Composition (3.1), macrostructure (3.5.1), and micro-inclusion rating (3.5.2) of each heat.

4.2.1.2 Hardness maximum (3.3.1) of as supplied normalized and annealed product of each lot of bars and forgings.

4.2.1.3 Tensile properties (3.5.3.1.1), hardness (3.5.3.1.2), fracture toughness (3.5.3.1.3), and average grain size (3.5.3.1.4) of each lot of bars and forgings after heat treatment as specified in 3.5.3.1.

4.2.1.4 Tolerances (3.7) of bars.

4.2.2 Periodic Tests

The following requirements are periodic tests and shall be performed at a frequency selected by the purchaser unless frequency of testing is specified by purchaser:

4.2.2.1 Ability of forging stock to develop required properties (3.5.3.2).

4.2.2.2 Frequency-severity cleanliness rating (3.6.1).

4.2.2.3 Grain flow of die forgings (3.6.3).

4.3 Sampling and Testing

4.3.1 For Acceptance Tests

4.3.1.1 Bars and Forging Stock

In accordance with AMS2370.

4.3.1.2 Forgings

In accordance with AMS2372.

4.4 Reports

4.4.1 The purchaser of bars and forgings shall furnish with each shipment a report showing producer identity, country where the metal was melted (e.g., final melt in the case of metal processed by multiple melting operations), the results of tests for chemical composition, macrostructure, and micro-inclusion rating of each heat, and for tensile properties, hardness, fracture toughness and average grain size of each lot, and stating that the product conforms to the other technical requirements. This report shall include the purchase order number, heat and lot numbers, AMS6516C, product form and size (and/or part number, if applicable), and quantity. If forgings are supplied, the size and melt source of stock used to make the forgings shall also be included.

4.4.2 Report the nominal metallurgically worked cross sectional size and the cut size, if different (also see 3.3.1).

4.4.3 The purchaser of forging stock shall furnish with each shipment a report showing producer identity, country where the metal was melted (e.g., final melt in the case of metal processed by multiple melting operations), the results of tests for composition, macrostructure, and micro-inclusion rating of each heat and the results of any additional property requirements imposed by 8.5. This report shall include the purchase order number, heat number, AMS6516C, size, and quantity.

4.4.4 When material produced to this specification is beyond the sizes allowed in the scope or tables, or other exceptions are taken to the technical requirements listed in Section 3 (see 5.2), the report shall contain a statement "This material is certified as AMS6516C(EXC) because of the following exceptions:" and the specific exceptions shall be listed.

4.5 Resampling and Retesting

4.5.1 Bars and Forging Stock

In accordance with AMS2370.

4.5.2 Forgings

In accordance with AMS2372.
